

Title: Systemic versus local adipokine expression differs in a combined obesity and osteoarthritis mouse model

Authors: Marie-Lisa Hülser, Yubin Luo, Klaus Frommer, Rebecca Hasseli, Kernt Köhler, Magnus Diller, Lina Van Nie, Christoph Rummel, Martin Roderfeld, Elke Roeb, Georg Schett, Aline Bozec, Ulf Müller-Ladner, Elena Neumann

Supplement 2:

The quantification of leptin- or adiponectin-positive cells was performed in the ventral meniscus as indicated above. All cells located in the meniscus were quantified as well as adiponectin-positive cells stained by immunohistochemistry. The proportion of adiponectin-positive cells vs. the total cell number was calculated (in %). For leptin, cells strongly expressing leptin were quantified as a low leptin expression was visible for most cells vs. the total cell number (in %).
