

Supplementary Figure for Ono *et al.* “Description of a new species of Tardigrada *Hypsibius nivalis* sp. nov. and new phylogenetic line in Hypsibiidae from snow ecosystem in Japan”.

Supplementary material 1, Figure S1. *Hypsibius morikawai*, holotype: (a) habitus, (b) buccal tube with macroplacoids, (c) claws III, (d) claws IV, (e-g) cuticle with very faint pattern, that is most probably located under cuticle and doesn't represent typical cuticular sculpturing. Scale bars are in micrometres.
