

Supplementary Figures:

S1

miR-183-S1

miR-492-S1

Supplementary Figure 1. Quantification of stable over-expression of miR-183-5p and miR-492 in non-neoplastic S1 cells through pLenti-III-miR-GPF tagged vectors using fluorescence-activated cell sorting (FACS). After all cell lines were stably established, they were cultured in 2D for 11 days, and FACS was performed to identify the GFP+ parent percent, as highlighted in a red box.
