

Supplementary Data S11. Time-calibrated phylogenies of Carcharhiniformes. The chronograms present the results from the BEAST analyses that simultaneously estimated the topology and divergence times for the Carcharhiniformes and Lamniformes. We performed four analyses to take into account the effects of the number of molecular clocks and of the maximum age at the tree root (see Methods). We compared dating analyses made with four molecular clocks versus dating analyses made with seven molecular clocks. We also evaluated the effect of maximum age at the root when set to 208.5 Ma or to 251.9 Ma.

210 sharks, 7 fossils calibrations, 4 clocks 208 Ma max age

210 sharks, 7 fossils calibrations, 4 clocks 251 Ma max age

210 sharks, 7 fossils calibrations, 7 clocks 208 Ma max age
