

Supplemental figure 1. The relationship between 12 hub genes expression and the overall survival of patients with Wilms tumor. *KIF2C*, kinesin family member 2C; *CENPE*, centromere protein E; *KIF20A*, kinesin family member 20A; *TYMS*, thymidylate synthetase; *TOP2A*, topoisomerase II alpha; *KIF15*, kinesin family member 15; *UBE2C*, ubiquitin-conjugating enzyme E2C; *CCNB2*, cyclin B2; *TPX2*, TPX2 Microtubule Nucleation Factor; *EZH2*, enhancer of zeste 2 polycomb repressive complex 2 subunit; *CDC20*, cell division cycle 20; *CENPF*, centromere protein F.
