

Figure S1

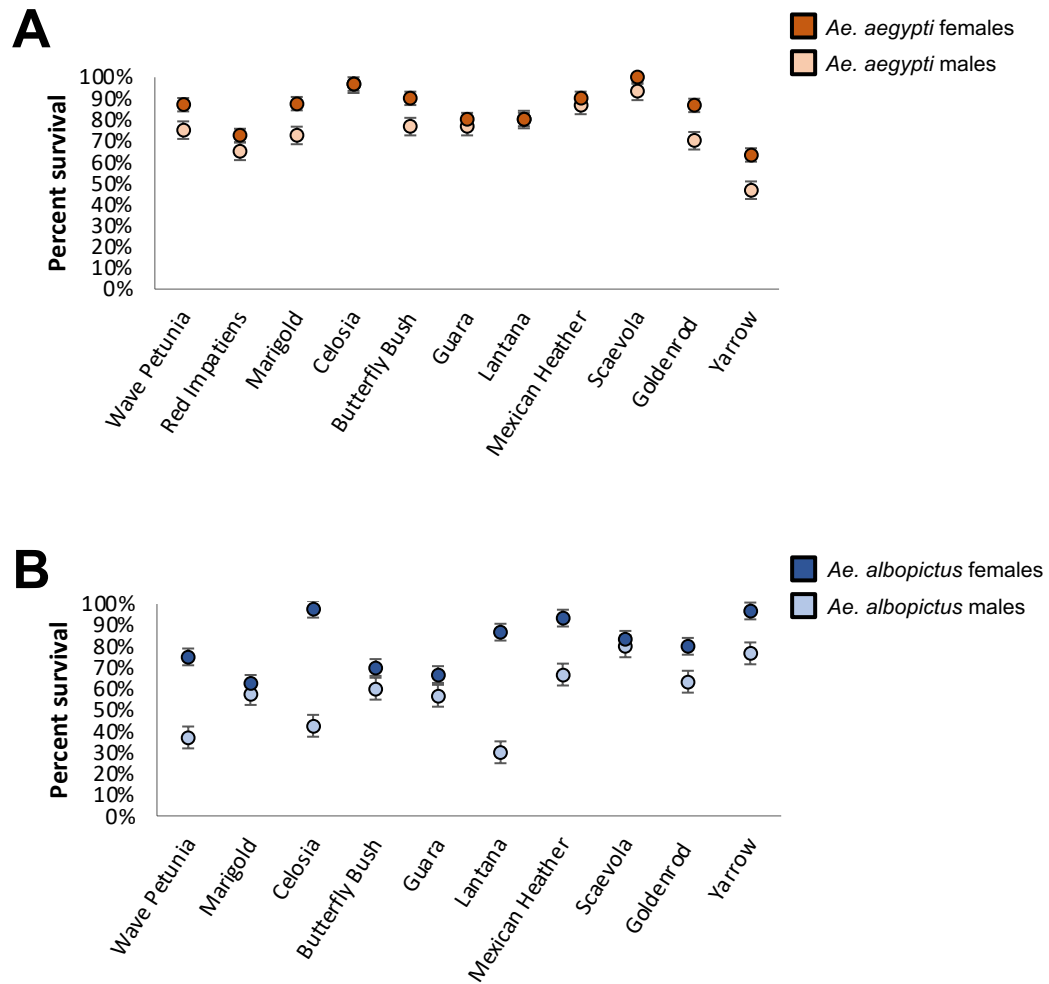

Figure S1. Survival rate of mosquitoes used for plant visitation assays (16 hrs; 9 a.m. - 5 p.m.). Percentages are represented as an average of the three replicates ($n = 30$ for each data point) performed for each plant species. (A) *Ae. aegypti* survival rate for males (light orange) and females (dark orange). (B) *Ae. albopictus* survival rate for males (light blue) and females (dark blue).
