

A

B

The original bands shows ZNF560 expression detected by Western blot after ZNF560 knockdown. In panel A, the band at 30 kDa represents ZNF560, while in panel B, the band at 36 kDa represents GAPDH. From left to right, the lanes correspond to the marker, knockdown control HOS cells, ZNF560 knockdown HOS cells, knockdown control MG63 cells, and ZNF560 knockdown MG63 cells.
