Table S1. Mice weight and White blood cells number before and 72h post- MEMP treatment

Mice	Weight before treatment (g)	Weight after treatment (g)	Leucocytes/mm3
F1	18,75	19	6500
F2	17,15	17	12200
M1	24,5	25	15550
M2	25,7	25,9	15100

2 females (F1 and F2) and two males (M1 and M2) were subjected to a MEMP treatment and their weight and white blood cells determined 72h afterwards.
