

Supplementary Figure 1. Original (A1 & A2) and cropped (B) PFGE gel images presented for ease of comparison. The IDs of the isolates are labeled above each lane. "M" indicates the molecular weight marker. In panel B, PFGE profiles are highlighted with orange lines and labeled with capital letters above the corresponding bands. All samples were derived from the same experiment and the gels were processed in parallel. Please note that the membrane edges are not visible due to the original photographs being taken at a higher zoom level.
