

Full-length, unprocessed Western blot images for P62 expression in liver tissue from all experimental groups. Each group includes **n = 2 biological replicates**.

Lanes are labeled accordingly: Control (Rep 1 & Rep 2), HFFD (Rep 1 & Rep 2), and HFFD + Curcumin (Rep 1 & Rep 2).

No high-contrast or nonlinear adjustments were applied. The full blots are presented to support the representative bands shown in Figure 2B of the main manuscript.
