

Supplementary figure S2.

Sup. Fig. S2 Effects of ANGPTL4 on SAHA treatment in CC cells. ANGPTL4-overexpressing cells, including (a) SiHa and (b) CaSki, were treated with SAHA for 48 and 72 hours, and their cell viability was measured using the MTS assay. The bar graphs show a reduction in cell viability of ANGPTL4-overexpressing cells (OE_ANG) compared to controls (OE_C). * $P < 0.05$, ** $P < 0.01$, and *** $P < 0.001$.
