

Characterization of circRNA Expression Profiles and Functional Roles in a Mouse Model of Liver Injury Induced by OSA

Qingshi Chen^{1,†}, Huiting Lai^{2,†}, Yuwei Chen^{3,†}, Zhuli Peng², Siying Wu², Dexin Liu^{2,*}

S1 Fig. CircRNAs that are differentially expressed in the liver tissue of CIH mice.

The Venn diagram represents the upregulated, downregulated, and unchanged circRNA expression between the control and CIH groups.

S2 Fig. CircRNAs that are differentially expressed in the liver tissue of CIH mice.

The heatmap illustrates the statistically significant differentially expressed circRNAs between the control and CIH groups.
