

(A) pLI50 + *qacA*

(B) pLI50 + *qacB*

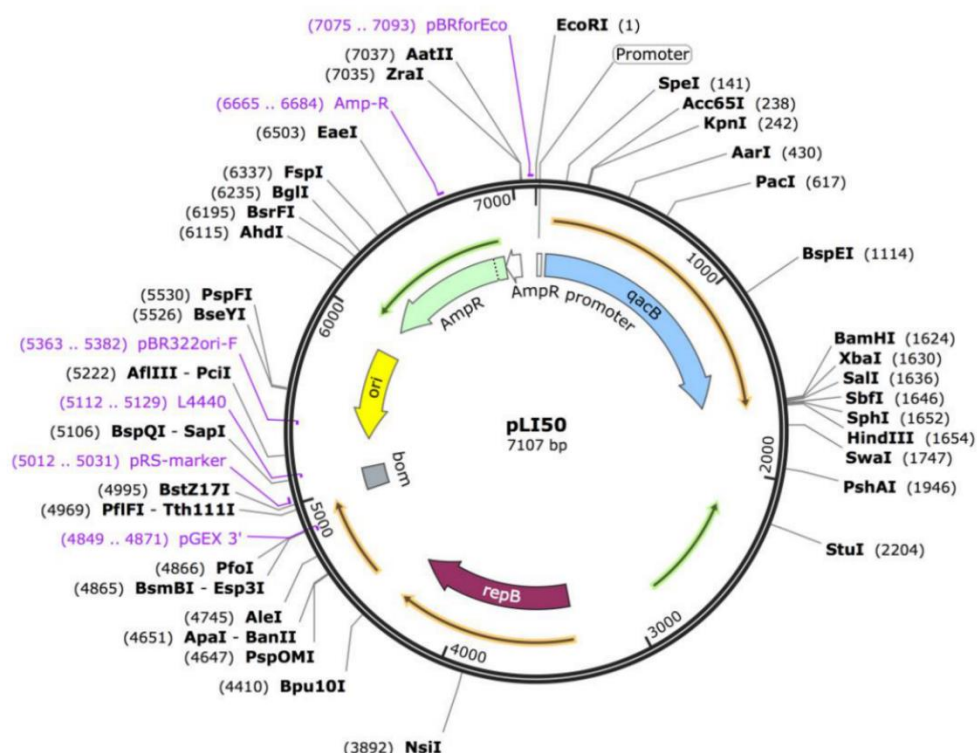

Figure. S3. Schematic maps of pLI50 constructs carrying either *qacA* (A) or *qacB* (B). Inserts were cloned between EcoRI and BamHI sites under their native promoter. Restriction enzyme sites, ampicillin resistance markers, replication origin (ori), and repB are indicated. The total plasmid length is 7,146 bp.
