

Supplementary Data 1. Anonymized interview summary table

This dataset contains an anonymized, publication-ready Excel table summarizing stakeholder interviews (n=17) on economic frameworks and pricing models for AI-enabled diagnostic decision support systems (DDSS) in healthcare. The sample covers clinical and non-clinical decision makers across Germany, Austria, and Switzerland (DACH). The table preserves the original structure used in the manuscript. Identifying details have been minimized in accordance with GDPR and ethical safeguards. This dataset supports the manuscript "Pricing Models for Diagnostic AI Based on Qualitative Insights from Healthcare Decision Makers".
