

Description of Additional Supplementary Files

File Name: Supplementary Data 1

Description: Details of sample used in discovery phase quantitative proteomics, targeted validation, and clinicopathological analysis.

File Name: Supplementary Data 2

Description: Human altered proteins in plasma of falciparum patients as compared to healthy individuals.

File Name: Supplementary Data 3

Description: Human altered proteins in plasma of vivax infected patients as compared to healthy individuals.

File Name: Supplementary Data 4

Description: The list of the parasite proteins identified from plasma samples of severe falciparum malaria.

File Name: Supplementary Data 5

Description: Prediction of best possible candidates to distinguish various febrile conditions using a machine learning approach.

File Name: Supplementary Data 6

Description: Lists of peptides for validation study using MS-based Multiple Reaction Monitoring (MRM) assays.

File Name: Supplementary Data 7

Description: Human altered proteins in plasma of dengue infected patient as compared to healthy individuals.
