

Description of additional supplementary file

File name: Supplementary video

Description: Dynamics of HP1 α condensates in HeLa cells stably transfected with HP1 α -GFP in non-confined and 5 μ m confinement states. Representative videos were made from maximum intensity projections of Z-stacks with 0.5 μ m step size imaged at 30-minutes intervals for 13 hours. The red circle shows an example of a HP1 α condensate undergoing scission and fusion events.
