

MCSP⁺ metastasis founder cells activate immunosuppression early in human melanoma metastatic colonization

In the format provided by the
authors and unedited

Supplementary Figure 1. Flow cytometry gating strategies. **a**, Gating strategy for the analysis of CD127+CD25+CD4+ T cells, PD1+Tim3+ CD8 T cells and their expression of indicated protein markers, in lymph nodes of melanoma and non-melanoma patients. **b**, Gating strategy for the analysis of MelDCC and their expression of indicated protein markers. **c**, Gating strategy for the analysis of CD8 T cell proliferation and effector cytokines as a function of CFSE-dilution. **d**, Gating strategy used for the analysis of sEV-uptake by CD8 T cells. **e**, Gating strategy for the detection of Celltrace Violet- and CFSE-labeled T2 cells in *in vitro* cytotoxicity assays.
