

Description of Additional Supplementary Files

File name: Data 1

Description: Mendelian randomization estimates of the effects CMR-measured changes in cardiac function and structure have on the development of cardiac diseases.

File name: Data 2

Description: Mendelian randomization median estimates of the effects CMR measured changes in cardiac function and structure have on the development of cardiac diseases.

File name: Data 3

Description: Mendelian randomization estimates of the effects CMR measured changes in cardiac function and structure have on the development of non-cardiac diseases or traits.

File name: Data 4

Description: Mendelian randomization median estimates of the effects CMR measured changes in cardiac function and structure have on the development of non-cardiac diseases or traits.

File name: Data 5

Description: Mendelian randomization estimates of the effects an increase in liability of atrial fibrillation or heart failure has on the development of non-cardiac diseases or traits.

File name: Data 6

Description: Mendelian randomization median estimates of the effects an increase in liability of atrial fibrillation or heart failure has on the development of non-cardiac diseases or traits.

File name: Data 7

Description: The genetic variants used for in the Mendelian randomization analyses.
