

Source Data ED Fig. 8f: **Uncropped Scans of the cropped Western blots** in n=3 related to Extended Data Figure 8f. Protein level of phosphorylated EPHA4 in human cardiomyocytes treated with recombinant ephrin-B2 (“+”; 10μg/ml, 15min), compared to non-treated CMs (“-”). α-Tubulin-1B served as loading control. The red box indicated the relevant protein band, determined by the company-described size in kDa.
