Appendix Figure S1.....Page 2

Appendix Figure S1. *Shigella* Ospl effector induces caspase-8 activation

HT-29 cells were infected with the indicated *Shigella* strains and incubated for 8 h. Cells were harvested and subjected to measurement of caspase-8 activation. Caspase-8 activity is reported as relative light units (RLU) of infected samples, minus the value in uninfected samples.

Data are expressed as the mean $\pm$ SD from triplicate and representative of three independent experiments ($P = 0.0005$ for $\Delta ospC1$ and $P = 0.00218$ for $\Delta ospl$; one-way ANOVA).

Data are considered significant when $P < 0.05$, with $*P < 0.05$
