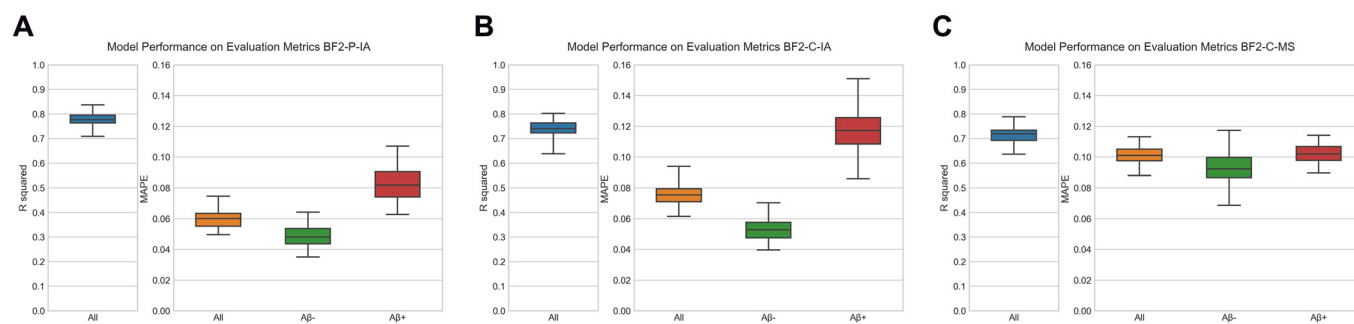

Figure EV1. Performance of models trained on sub-cohorts.

Panels (A–C) illustrate the bootstrapping evaluation results on the test sets for the sub-cohorts BF2-P-IA (A), BF2-C-IA (B), and BF2-C-MS (C), with R^2 and MAPE on the whole $A\beta$ -PET range, and the metrics MAPE_POS and MAPE_NEG on the $A\beta$ -positive and $A\beta$ -negative range, respectively. The box plots show the quartiles of these 100 iterations ($IQR = Q3 - Q1$), with median as center line, and whiskers extending to minimum and maximum points.
