

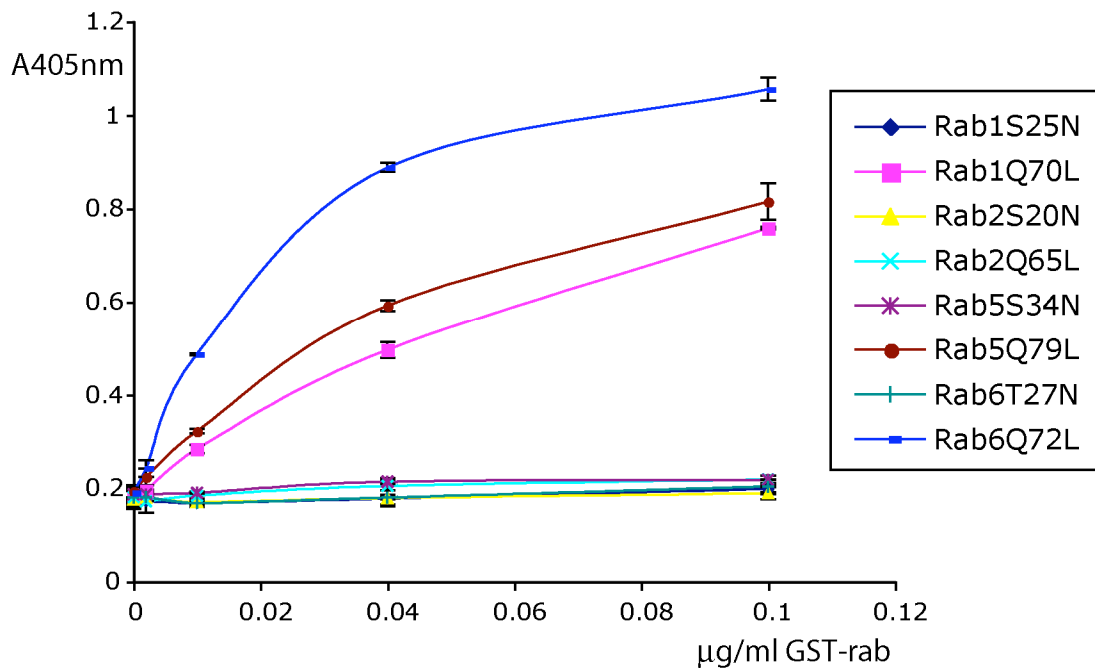

Figure S1. Solid phase binding of OCRL1 to GDP- or GTP-locked rabs

Recombinant full-length OCRL1 was immobilised on plastic and incubated with the indicated amounts of GST-tagged GDP- (S or T to N) or GTP-locked (Q to L) rab proteins. Binding was measured using HRP-conjugated antibodies and colorimetric detection at 405 nm. Results are indicated as the mean +/- SD of two experiments carried out in duplicate.
