

Nematodes join the family of chondroitin sulfate-synthesizing organisms:

Identification of an active chondroitin sulfotransferase in *Caenorhabditis elegans*

Tabea Dierker¹, Chun Shao², Tatjana Haitina³, Joseph Zaia², Andrea Hinas⁴, Lena Kjellén^{1,*}

Supplementary Figure S1: CS-56 staining in control and *hst-6 hst-2* animals

Larval stages of control (left panel) and mutant animals (right panel) were stained with CS-56 antibody as described. Staining was visible in both strains but was more pronounced in *hst-6 hst-2* animals. Scale bars demarcate 100 μ m.
