

Additional file 6.

Absence of Oct-6 in macrophages has no impact on MCMV replication. WT and Oct-6^{-/-} FLMs were infected with MCMV (MOI=0.1) for 90 min, washed with PBS and fresh medium was added. Supernatants were collected 0, 1, 3 and 6 days (d) after infection and virus titers were determined by plaque forming assays using Stat1^{-/-} MEFs. Mean values $\pm$ SD of two experiments are shown.
