

Additional File 4: *Glob3* gene region with Jockey transposon

Schematic diagram of the genomic region of *D. melanogaster glob3* including the transposable element inserted downstream of the *glob3* gene in comparison to the corresponding genomic region of *D. sechellia glob3*. In *D. melanogaster*, the insertion and the putative duplicated sequences are indicated. In *D. sechellia*, the predicted promoter sequence spanning the transposon insertion sequence in *D. melanogaster* are highlighted. Exons and 5'UTR and distances between 3' end of transposable element and Exon1 in both *D. melanogaster* and *D. sechellia* are plotted.
