Correlation coefficient of gene and SVA subtype density across human chromosomes

SVA Subtype	Correlation Coefficient
A	-0.55
B	0.32
C	0.59
D	0.72
E	0.36
F	0.70
F1	0.31

Correlation coefficients for the relationship of SVA density with gene density for each SVA subtype calculated using the bootstrap confidence interval (95%) to remove outliers. All subtypes showed a positive relationship between the two variables except A.
