

Additional file 3 – Results of interval mapping on activity data of the light phase.

(A) THA with no covariate (black line), and THA with AT as a covariate (blue line) or AA (red line), (B) AA with no covariate (black line), and AA with AT as a covariate (red line) or THA (blue line), (C) AT with no covariate (black line), and AT with AA as a covariate (red line) or THA (blue line). Significant LOD scores during the light phase were around 3.4 and none of QTL exceeded the significant level.
