

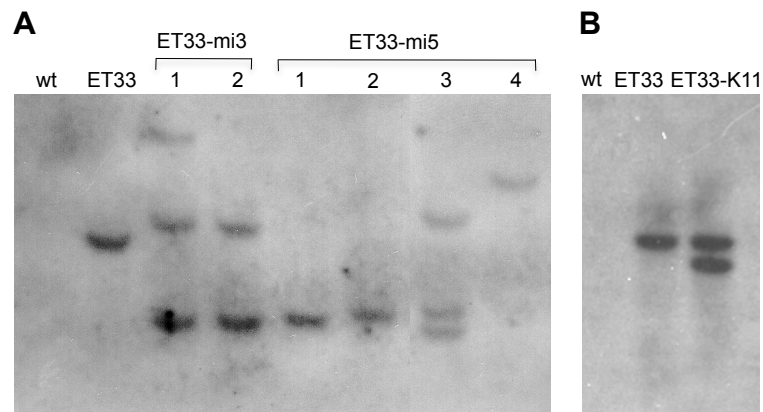

Figure S1 - Evaluation of the *Tol2* copy numbers in F₁ fish

DNA was isolated from individual F₁ fish (shown as the numbers) that originated from the same F₀ founder (shown as ET33-mi3, ET33-mi5 or ET33-K11). The DNA samples were digested with *Hind*III and hybridized with DIG-labeled *EGFP* probe. (A) and (B) represent the separate blots. wt, wild type; ET33, donor line.
