

Supplemental Figure S3.

Gene copy number differences were detected among *S. cerevisiae* strains 06L3FF02, 06L6FF20, AEB Fermol Rouge, Lalvin ICV D254, Lalvin EC-1118 and J940047 relatively to the genome of strain S288C. Relative copy number values (fold change relatively to strain S288C) were obtained from a comparative genome hybridization on array (aCGH) study (Carreto *et al.* 2008. *BMC Genomics* 9: 524). Only the genes relevant for discussion in the present manuscript were represented.
