

Additional file 13. Expression profiles of *CRTISO* and putative *SDGs* involved in carotenoid synthesis. Heatmap of *CRTISO*, *S1SDG33* and *S1SDG34* RNA-seq expression data from 1cm_fruit, 2cm_fruit, 3cm_fruit, mature green fruit (MG), berry at breaker stage (B) and berry ten days after breaking (B10). The expression values are measured as reads per kilobase of exon model per million mapped reads (RPKM).
