

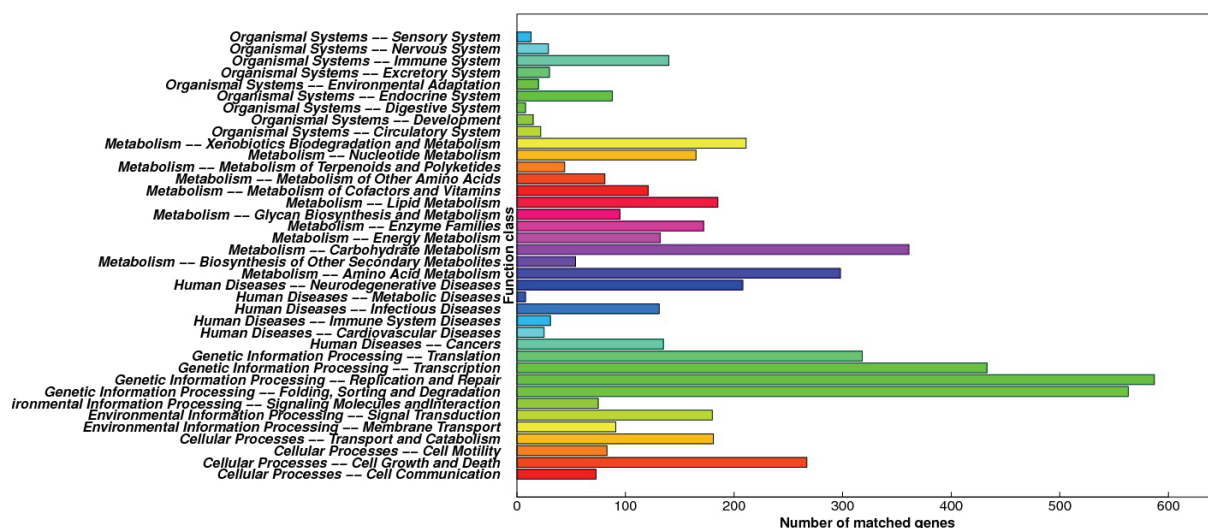

Figure S1 Classification of predicted genes into KEGG categories.

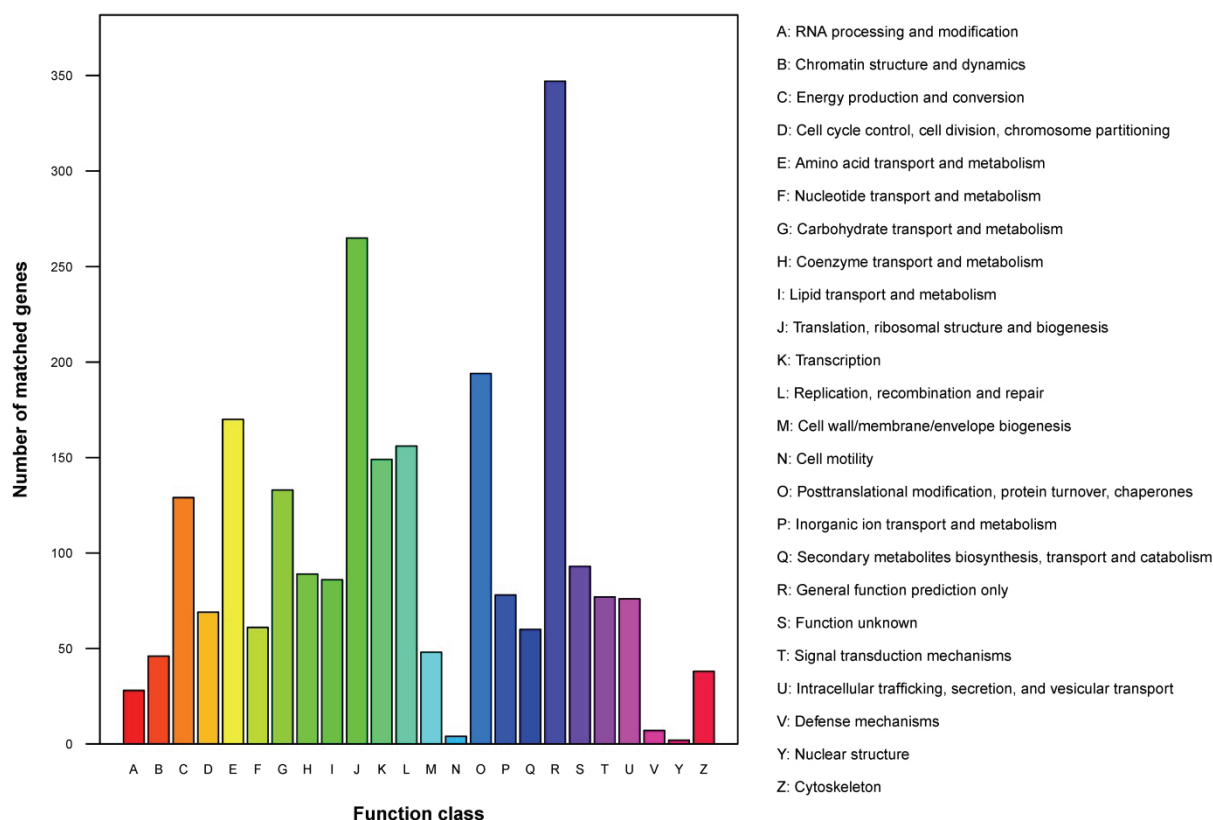

Figure S2 Classification of predicted genes into COG clusters.

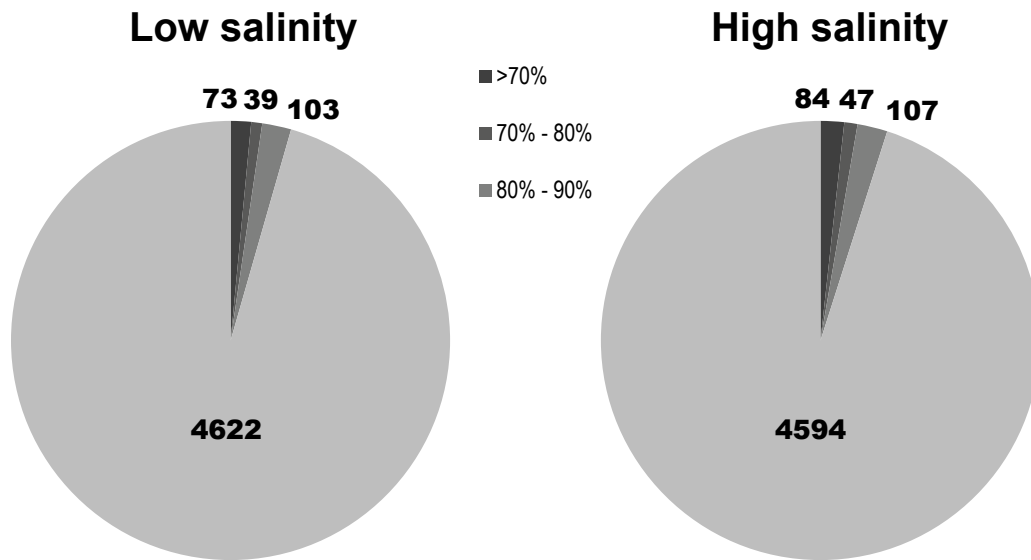

Figure S3 Distribution of transcriptome gene coverage. The pie charts show the distributions of gene coverage (the percentage of a gene covered by reads) of *Wallemia ichthyophaga* grown at 10% NaCl (low salinity) and 30% NaCl (high salinity).

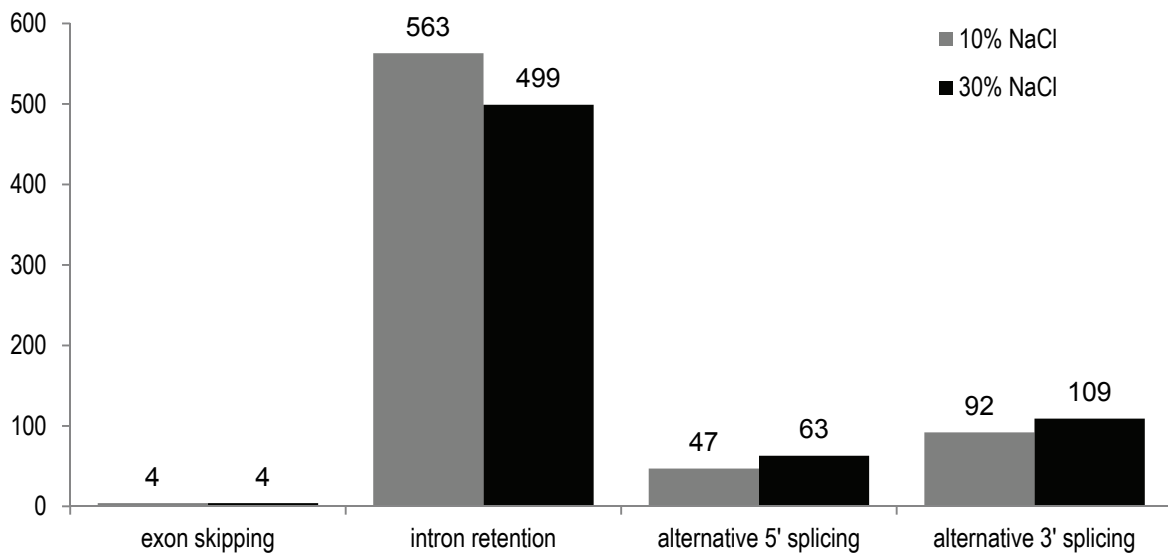

Figure S4 Number of different alternative splicing events at each salinity.
