

Additional File 1

Sensitivity of *S. cerevisiae* strains to peptides PAF26 and Melittin

Additional File 1. Sensitivity of *S. cerevisiae* strains to peptides PAF26 and Melittin. *S. cerevisiae* strains RAY3A, BWC7a, FY1679, and BY4741 at exponential phase and diluted to two different concentrations (10^5 or 10^4 cfu/mL) were treated with different concentrations of peptides and at two distinct temperatures, as indicated. Aliquots were dotted on peptide-free YPD plates to determine viability after treatment.
