This tool provides a web interface to search data in the epiPATH database. There are different ways to search data:

- Simple search:** You can search data by selecting a module of the database. Simple search returns data from only one table and from some tables of the selected module. The search has simple queries about each module and a help to handle data via interface.
- Advanced search:** With the advanced search you can get data reports and perform more complex queries.

ADVANCED SEARCH

Perform your own queries to epiPATH database at the form below. There are a lot of SQL, table and records in the system but you can find at the epiPATH Manual a basic SQL SELECT record to get started.

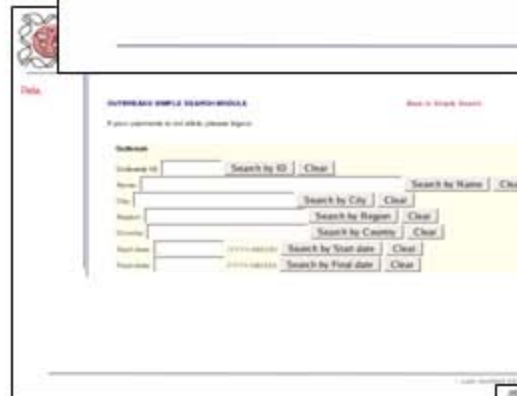

SELECT

Give Report:

At this section you can get a report of a selected table of the database. A report contains all data of a table or instead of the report of getting it. It can help you to know your data of the database. Remember if you have no permission at some table, you would not be able to get a report.

Select a table: **alignments**
