This tool provides a web interface to insert data to the epiPATH database. There are two ways to insert your data:

1. Uploading a file
2. Submitting data by a form

You can upload data to the database by selecting a file containing your data. At this section you can find an excel template to help you generating a suitable file.

You can upload data to the database by filling some module forms and sending them directly. At this section you can find some instructions and informations about each module that can help you to choose a suitable form for your data.
