epiPATH

Molecular Epidemiology Database for Infectious Pathogens

Data

Insert
Search
Update
Delete

This tool provides a web interface to update data in the epiPATH database. To update data you must have permission to update. If you have not this permission, please, contact with your system administrator. Due to database security reasons, you can update a single value of the database per update.

INSTRUCTIONS:

You should select the name of the database table, the field name at the table to which your value belongs, the ID (identification value in the table) of your record and the new value you want to update. *How to fill in the IDs.*

UPDATE:

Select a table to update (Choose one) Select a field to update (Choose one)
