

Western blot analysis of Id2 and Id2-DBM- δ HLH expression in MCF-7 and SKOV-3 cells. The blots show Id2 and Id2-DBM- δ HLH protein levels relative to β -actin across four conditions: Empty vector, Id2, Id2-DBM, and Id2-DBM- δ HLH. In MCF-7 cells, Id2-DBM- δ HLH shows a distinct band. In SKOV-3 cells, Id2-DBM- δ HLH shows a band at a lower position than Id2.

Western blot analysis of Id2 and Id2-DBM- δ HLH expression in MCF-7 and SKOV-3 cells. The blots show Id2 and Id2-DBM- δ HLH protein levels relative to β -actin. In MCF-7 cells, Id2-DBM- δ HLH is only expressed in the Id2-DBM- δ HLH transfected lane. In SKOV-3 cells, Id2-DBM- δ HLH is expressed in both the Id2 and Id2-DBM- δ HLH transfected lanes.
