

A

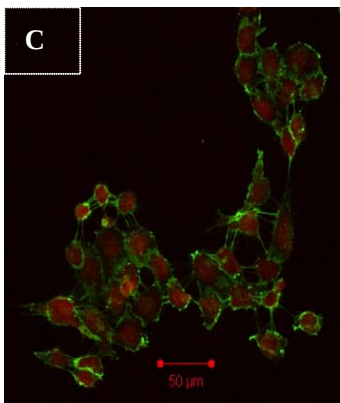

50 μm

This panel shows a wide-field fluorescence micrograph of a confluent monolayer of cells. The cells are stained with a green fluorescent marker, likely highlighting the cytoskeleton or cell nuclei. The cells are densely packed and exhibit a typical epithelial morphology with visible cell-cell junctions. A scale bar in the bottom left corner indicates a length of 50 μm .

B

50 μm

This panel shows a fluorescence micrograph of a cell cluster. Two white arrows point to specific cells within the cluster. A scale bar in the bottom left corner indicates a length of 50 μm .

C

50 μm

This panel shows a fluorescence micrograph of a cell cluster, similar to panel B. A scale bar in the bottom left corner indicates a length of 50 μm .
