

Has zero parasitaemia been replaced by the detection limit?

Yes, last point replaced

No, last point not replaced

1. for 3 data points - fit linear curve
2. for 4 data points fit tobit linear regression
3. for 5 data points - fit linear and quadratic tobit regression
 - 3.1 when parasitaemia increases at second point by more than 25% - fit linear tobit regression from the second point
4. for 6 or more data points - fit linear, quadratic and cubic tobit regression

1. for 3 data points - fit linear curve
2. for 4 data points fit linear, quadratic regression
 - 2.1 when parasitaemia increases at second point by more than 25% - fit linear regression from the second point
3. for 5 or more data points - fit linear, quadratic and cubic regression
