

Supplementary Figure 2: TOV21G, IGROV1, A2780CP, SKOV3ip1 cells were infected with *d/922-947* (MOI 10; approximately 100 viral particles) for two hours. Cells were washed three times then harvested into 0.5ml 0.1M Tris pH 8.0 and subjected to three rounds of freeze/thawing (liquid N₂/37°C). Internalised viral genomes were quantified by Quantitative PCR.
