

(a)

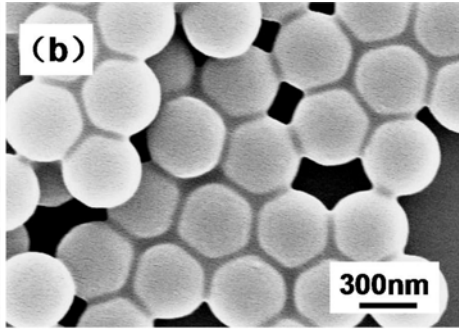

300nm

This scanning electron micrograph (SEM) shows a dense, uniform monolayer of circular particles. The particles are closely packed together, filling most of the frame. A scale bar at the bottom right indicates a length of 300 nm.

(b)

300nm

This scanning electron micrograph (SEM) shows a monolayer of circular particles, similar to image (a), but with a noticeably higher density of gaps between the particles. The particles are still generally circular and uniform in size. A scale bar at the bottom right indicates a length of 300 nm.
