

Barley stripe mosaic virus as a gene silencing vector in barley roots and in *Brachypodium distachyon* and oat

Additional file 6: Phosphate content in hydroponics: *HvIPS1* experiment

Phosphate content in the roots of plants inoculated either with BSMV-IPS1 (black bars) or BSMV-GFP²⁵⁰ (white bars). Plants were grown in hydroponic culture with 0 or 1 mM phosphate and harvested either 5 days postinoculation (dpi), 7dpi, or 9dpi. Data from experiment shown in Figure 2a.
