

Underlying problem: getting research into practice
1) Evidence does not take account of context > interventions fail as not fit for purpose / no organisational alignment.
Result: evidence is not getting utilised to improve the quality and efficiencies of health and social care.

Scoping consultative review

CLAHRC funding awarded (2008-2013)

Commissioners Panel

Service User Panel

Scientific Committee (annual)

Research Teams, including embedded Implementation researchers (see figure 1 and table 1)
