Dr A.M. Bosch

Dear My PKU, Your parents are right, at the time of illness with fever values go up. As you saw, they usually come down very rapidly if the fever is gone. You can eat your normal amount of natural protein.

My PKU

Dear dietician, my phe value was really high last week. My parents say it is because I was ill with a high fever, is that true? I now eat my normal amount of protein and my value is almost normal again now. is that OK?
