

Table I

ApoER2 expression affects the extent of APP695HA internalization and the half-time of ^{125}I -antiHA internalization in a dose dependent manner*

μg ApoER2HA	maximal internalization (% of total)	^{125}I -antiHA internalization ($t_{1/2}$) (min)
0	71.7	2.3
5	61.7	3.6
10	57.6	4.6
20	52.4	9.2

* parameters were calculated from sigmoidal fit of data from Figure 6.
