

```
<dictionary
  xmlns="http://www.xml-cml.org/schema"
  convention="convention:dictionary"
  title="CompChem concepts"
  dictionaryPrefix="compchem"
  namespace="http://www.xml-cml.org/dictionary/compchem/">

  <entry id="job" term="job"> ← ① Define a new concept
    <definition>
      A computational job or task.
    </definition>
    <description>
      ...
    </description>
  </entry>
  .
  .
  .
</dictionary>
```

A declared CompChem namespace prefix = "cc"

entry id = "job"

② Create QName - "cc:job"

③ Apply the QName using @dictRef

CompChem Document

```
<module dictRef="cc:job"
  xmlns:cc="http://www.xml-cml.org/dictionary/compchem/">
  ...
</module>
```
