

Initial values and changes during evolution: ( initialization in first version,  addition,  deletion,  change/update,  attribute,  relationship)

Date of change	Type of change	Type of item	Changed item	New value(s)	Old values(s)
2002-12		@	synonym	GO:0000130	
2002-12		@	isObsolete	false	
2002-12		@	definition	Any protein required to initiate or regulate transcription; includes both gene regulatory proteins as well as the general transcription factors. definition_	
2002-12		@	name	transcription factor	
2003-03		@	definition	Any protein required to initiate or regulate transcription; includes both gene regulatory proteins as well as the general transcription factors.	Any protein required to initiate or regulate transcription; includes both gene regulatory proteins as well as the general transcription factors. definition_
2003-04		@	name	transcription factor activity	transcription factor
2003-05			is_a	- GO:0030528 - GO:0003677	
2004-03		@	synonym		GO:0000130
2005-01		@	synonym	GO:0000130	
2005-09		@	definition	Any activity required to initiate or regulate transcription; includes the actions of both gene regulatory proteins as well as the general transcription factors.	Any protein required to initiate or regulate transcription; includes both gene regulatory proteins as well as the general transcription factors.
2006-05		@	definition	The function of binding to a specific DNA sequence in order to modulate transcription. The transcription factor may or may not also interact selectively with a protein or macromolecular complex.	Any activity required to initiate or regulate transcription; includes the actions of both gene regulatory proteins as well as the general transcription factors.
2010-08			is_a	GO:0003674	- GO:0030528 - GO:0003677
2010-09		@	definition	Interacting selectively and non-covalently with a specific DNA sequence in order to modulate transcription. The transcription factor may or may not also interact selectively with a protein or macromolecular complex.	The function of binding to a specific DNA sequence in order to modulate transcription. The transcription factor may or may not also interact selectively with a protein or macromolecular complex.
2010-09		@	name	sequence-specific DNA binding transcription factor activity	transcription factor activity
2010-10			is_a	GO:0001071	GO:0003674
