'Landscape Approaches' in humid and dry tropics

A systematic review map

The Center for International Forestry Research (CIFOR) is conducting a systematic review asking: **What is the 'Landscape Approach' and how has it developed?**

How you can help

The review team are in the process of identifying relevant grey literature sources from organizations and institutions engaged in forestry, agriculture and landscape scale projects. We are looking for working papers, unpublished (non-peer reviewed) material and project documents that may contribute towards the review.

What we are looking for

We are looking for relevant evidence on:

- Different institutions and frameworks engaging with Landscape Approaches
- How different actors define the Landscape Approach
- Locations of relevant frameworks representative of the Landscape Approach
- Purposes of implementing Landscape Approaches
- Reports of successful and unsuccessful landscape initiatives

Geographic scope

The review will focus on humid and dry tropical landscapes

Get in touch

If you or your organization can assist by providing any relevant documents please do get in touch. Equally, if you are aware of similar projects, we would be very interested in hearing from you.
