

ADDITIONAL FILE 3

Figure S1

Figure S1. Histological appearance of bone destruction at low magnification.

Representative composed images of femurs injected with PBS, wild type (MDA-MB-231), scrambled and shRNA MDA-MB-231 cell clones were obtained after the automatic alignment provided by Adobe Photoshop CS4 software of acquired fields with a 5X objective. The insets are higher magnification of fields reported in Figure 7A (except for Scrambled sample). Scale bar = 500 μ m.
