

A

B

Figure S1. HIF-1 binding is associated with up-regulated expression under hypoxic conditions.
A. A gene set consisting of all HIF-1 ChIP-chip hits in U87 cells is highly enriched for genes whose expression are upregulated under hypoxic conditions.
B. Gene expression changes of the 158 leading edge genes from the GSEA analysis comparing hypoxic samples (0.5% O₂, 12hr) to normoxic samples.
