

Additional File 9, Figure S8. Analysis of the inverse relationship between transcript levels of miRNAs and their putative target mRNAs in mouse mammary tissues. Global distribution of the Pearson correlation coefficients between miRNAs and (a) miR-10b; (b) miR-412 and (c) miR-494. The dotted curves show the distribution of the correlation coefficients for all miRNAs. The solid curves show the correlation coefficients for only those miRNAs that are predicted target of miR-10b, miR-412 or miR-494.
